

AI Client Acquisition & Onboarding System

Developed by

Murad Khan

Flutter Developer | Automation Engineer

Field	Details
Project Name	AI Client Acquisition & Onboarding System
Developer	Murad Khan
Platform	Make.com (No-Code Automation)
AI Model	Groq — llama-3.3-70b-versatile
Database	Airtable — AI CRM System
Testing Tool	Postman (No Frontend)
Total Workflows	4 (WK1, WK2, WK3, WK4)
Completion Date	July 2026

■ PROJECT STATUS: COMPLETE

1. Project Overview

A fully automated CRM system built on Make.com by Murad Khan that manages client lifecycle from initial inquiry through proposal, negotiation, scheduling, follow-ups, and weekly reporting — with no frontend. All requests are simulated via Postman.

- No frontend — Postman simulates all requests
- AI-powered analysis and classification (Groq AI)
- Auto Google Drive folder per client
- Airtable as live CRM database
- Automated follow-up with Cold Lead logic
- Google Calendar meeting scheduling
- Weekly AI-generated management report

Tool	Role
Make.com	Main automation platform
Airtable	CRM database (Leads table)
Groq AI	Analysis, classification, report generation
Gmail	Proposals, follow-ups, reports
Google Drive	Auto-create client folders
Google Calendar	Schedule meetings
Postman	API testing (no frontend)

2. All Scenarios — Overview

Make.com Scenarios Dashboard — All 4 Workflows by Murad Khan

Workflow	Trigger	Modules
WK1 - New Lead Intake	Webhook (Postman)	Groq, Google Drive, Airtable, Gmail
WK2 - Client Reply Handler	Webhook (Postman)	Groq AI, Router (4 branches), Airtable
WK3 - Follow Up System	Scheduled Daily	Airtable, Iterator, HTTP/Groq, Gmail, Airtable
WK4 - Weekly Report	Every Monday	Airtable, Tools, Groq, Gmail

3. Workflow 1 — New Lead Intake

TRIGGER: Webhook — Postman POST Request

Receives new lead data via Postman, analyzes the project using Groq AI, creates a Google Drive folder, stores the record in Airtable, and sends a proposal email to the client.

```
{ "name": "John Doe", "email": "john@example.com", "company": "ABC Inc", "project": "Need AI chatbot", "budget": "3000" }
```

Step	Module	Action
1	Webhooks	Receive POST from Postman
2	Groq AI	Analyze project, generate AI summary
3	Google Drive	Create client folder automatically
4	Airtable	Save all lead data, set status: Proposal Sent
5	Gmail	Send proposal email to client

Workflow 1: Webhooks → Groq → Google Drive → Airtable → Gmail

4. Workflow 2 — Client Reply Handler

TRIGGER: Webhook — Postman POST Request

When a client replies to the proposal, Groq AI classifies the message into one of 4 categories and the Router module takes the appropriate action automatically.

Classification	Action	Status
Negotiating	Update record	Negotiation
Ready To Proceed	Create Calendar meeting + confirmation email	Call Scheduled
Rejected	Update record	Lost
Interested	No action yet	Proposal Sent

Workflow 2: Webhooks → Groq AI → Router (4 branches)

5. Workflow 3 — Automated Follow-Up System

TRIGGER: Scheduled — Runs Daily at 09:00 AM

Runs every day automatically. Scans Airtable for leads with no response in 3+ days and sends follow-up emails. After 3 follow-ups, lead is marked as Cold Lead.

Step	Module	Action
1	Airtable	Search leads: Proposal Sent or Negotiation
2	Iterator	Loop through each lead record
3	HTTP/Groq	Generate personalized follow-up message
4	Gmail	Send follow-up email, increment count
5	Airtable	Update Last Email Sent + Follow-up Count

Workflow 3: Airtable → Iterator → HTTP (Groq) → Gmail → Airtable | Daily 09:00

6. Workflow 4 — Weekly Management Report

TRIGGER: Scheduled — Every Monday Automatically

Every Monday, fetches all Airtable records, calculates 6 key metrics, generates an AI business summary via Groq, and emails the complete report to management.

Metric	Formula
Total Leads	Count all records
Won Deals	Count Status = Won
Lost Deals	Count Status = Lost
Negotiations	Count Status = Negotiation
Calls Scheduled	Count Status = Call Scheduled
Pending Responses	Count Status = Proposal Sent

Workflow 4: Airtable → Tools → Groq AI → Gmail | Every Monday

Weekly Management Report email received in Gmail inbox

7. Airtable Database Structure

Field	Type	Description
Client ID	Auto	Unique record identifier
Name	Text	Client full name
Email	Email	Client email
Company	Text	Company name
Project Details	Long Text	Project description
Budget	Number	Client budget
Status	Single Select	Current lead status
Last Email Sent	Date	Timestamp of last email
Follow-up Count	Number	Total follow-ups sent
Drive Folder Link	URL	Google Drive folder URL
Meeting Date	Date	Calendar meeting datetime
Created At	Date	Record creation time

Lead Status Lifecycle:

New Lead	Proposal Sent	Negotiation	Follow Up 1	Follow Up 2	Call Scheduled	Won	Lost	Cold Lead
----------	---------------	-------------	-------------	-------------	----------------	-----	------	-----------

8. Testing — Postman

All workflows tested via Postman by Murad Khan. No frontend used.

Test	Method	Result
WK1 New Lead	POST to WK1 webhook	200 OK — Lead created, email sent
WK2 Client Reply	POST to WK2 webhook	200 OK — Status updated
WK3 Follow-Up	Manual Run	Email sent, count incremented
WK4 Weekly Report	Manual Run	AI report email received

Postman — POST request — Response: 200 OK

9. Learning Outcomes

- **Webhooks:** Receive and process HTTP POST requests from Postman
- **APIs & Postman:** Simulate real-world API calls without any frontend
- **Airtable CRM:** Live state database for complete client lifecycle
- **AI Integration:** Groq AI for analysis, classification, and report generation
- **State Management:** Lead status tracked across multiple workflows
- **Scheduling:** Daily and weekly automated triggers without manual input
- **Calendar Integration:** Auto-create Google Calendar meetings for qualified leads
- **Multi-Workflow Architecture:** 4 workflows working together as one complete system
- **CRM Concepts:** Full client lifecycle: Intake → Proposal → Negotiation → Close
